SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Task Management System

1. Introduction

1.1 Purpose

The purpose of the Task Management System is to provide users with a simple application for creating, organizing, updating, and tracking their daily tasks. The system helps users manage their tasks based on dates and monitor completed and pending work.

1.2 Scope

The Task Management System allows multiple users to create their own accounts and securely log in. After logging in, users can add, edit, delete, and complete tasks. Users can also select a date and view the tasks associated with that date.

1.3 Objectives

- To provide an easy-to-use task management application.

- To allow users to create and manage personal tasks.

- To organize tasks according to dates.

- To track completed and pending tasks.

- To support multiple users with individual login credentials.

- To reduce the difficulty of managing tasks manually.

2. Functional Requirements

2.1 User Registration

The system shall allow users to create a new account by providing the required registration details.

2.2 User Login

The system shall allow registered users to securely log in using their username or email and password.

2.3 Add Task

The system shall allow users to create and add new tasks with task details and a specific date.

2.4 View Task

The system shall allow users to view their created tasks and the details associated with each task.

2.5 Update Task

The system shall allow users to edit and update the details of existing tasks.

2.6 Delete Task

The system shall allow users to delete tasks that are no longer required.

2.7 Complete Task

The system shall allow users to mark a task as completed.

2.8 Task Organization

The system shall allow users to organize and view tasks according to specific dates.

2.9 Task Status

The system shall display the status of each task as completed or pending.

2.10 User-Specific Tasks

The system shall ensure that each user can access and manage their own tasks.

3. Non-Functional Requirements

3.1 Usability

The system shall provide a simple, clear, and user-friendly interface so that users can easily manage their tasks.

3.2 Performance

The system shall respond to user actions within a reasonable amount of time.

3.3 Security

The system shall protect user login credentials and task information from unauthorized access.

3.4 Reliability

The system shall perform task operations accurately and minimize unexpected data loss.

3.5 Availability

The system should be available whenever users need to create, update, or manage their tasks.

3.6 Maintainability

The system shall be easy to maintain, modify, and update when required.

3.7 Scalability

The system should support multiple users and an increasing number of tasks.

4. Interface Requirements

4.1 User Interface

- The system shall provide a Login page for user authentication.

- The system shall provide a Registration page for creating new accounts.

- The system shall provide a Task Management page for managing tasks.

- The system shall provide options to add, view, edit, and delete tasks.

- The system shall provide an option to mark tasks as completed.

- The system shall provide an option to select dates for tasks.

- The interface shall contain clear buttons, labels, text fields, and navigation options.

4.2 Hardware Interface

- The system shall operate on standard computers, laptops, tablets, or smartphones.

- The device shall have sufficient memory and processing capability to run the application.

- The system shall support standard input devices such as keyboard, mouse, or touchscreen.

4.3 Software Interface

- The system shall interact with a database to store user and task information.

- The system shall communicate with the application software for storing and retrieving task data.

- The system shall support the required operating system and application environment.

- If the system is web-based, it shall operate through a supported web browser.
